

The KULUMI Mini is a solar LED audio lamp with four brightness settings, speaker, FM radio, USB port, solar panel, rechargeable battery and closed or open slot (SD memory card).

LED Light with 4 Levels of Brightness

The light is directional like that of a flashlight and creates a uniform light like that of a lamp. The Mini takes an amount of light, focuses it then spreads it out more uniformly at 120 degrees. This gives a higher and more efficient lux to power ratio.

10%	25%	50%	100%
35h	18h	7h	4h
10 lm	40 lm	75 lm	150 lm

Audio Player with 8GB Memory and 3 Levels of Content Navigation

The Mini is available as an open slot with a micro SD card of 8GB or an internal memory of 8GB. The buttons are sturdy and allow you to easily navigate the 3 levels of content: Main/Root folder, Sub folder and File.

Compact and Lightweight

Dimensions: 136 mm x 33 mm x 82 mm
Weight: 195 g

Built-in 2W Speaker

Good sound quality allows up to 20 people to hear the audio content. In an enclosed space like a meeting hall, the speaker amplifies enough for everyone to hear. In gatherings and study sessions, it is often used to play songs, stories and educational materials, and to listen to the local radio station.

Built-in 0.7W Rechargeable Solar Panel

Nothing can rival our free source of power: Sunlight. The solar panel is one of the most important aspects of the KULUMI Mini. Whether you are in an area without access to electricity or encounter a sudden power outage, you can rely on the solar-powered Mini to give you light when you need it.

Rechargeable Battery

With a durable 3.2V / 1500mAh LiFePO4 battery (1000 to 2000 charge cycles) that recharges via the solar panel or a normal micro-USB cable, the Mini can be used for 4-35 hours depending on the brightness settings. Use the included 500 mm micro-USB cable with a normal USB 5V power adapter to recharge via a power outlet. Typical charge time is 2 hours.

For people who live in areas without access to electricity, they can make full use of the long-lasting battery, using the light at night and letting the unit recharge via solar panel during the day. This also saves a lot of money as there is no need to buy disposable batteries that are not only short-lived and expensive, but also harmful to the environment.

Robust - Weather/ Water/ Shock Resistant

The KULUMI Mini is made of Plastic Polymer ABS, a weather-resistant material, so it can be used in various conditions such as sunshine, rain, wind and even snow. It is not waterproof but water-resistant with a rating of IPX4.

Additional Features & Functions

USB port to recharge phone or any 5V device

Earphone and FM function

Play audio from a laptop or phone

Load custom content
